# Mother Nature's breath

You know it, we know it. There is only one reason why teak is still used as a material for the boat decks. There is simply no obvious high-quality alternative. Teak is the best that Mother Nature has to offer in this area. So we stuck to it.

The fact that it splits, breaks, splinters, cracks and creaks, we call charm. The fact that it's starting to become unaffordable and unpredictable price-wise, we call luxurious. The fact that it demands constant attention and maintenance, well, it keeps us busy. And the fact that it is becoming increasingly rare, we ignore.

Because there is no alternative. It's Mother Nature's breathtaking best. Breathtaking indeed...

ntaking best

**Ecology**

Teak is one of Mother Nature's masterpieces. One of the most beautiful, most durable and most impressive materials she has ever created. And, what's more, one of the most useful. A forest full of teak is nothing less than one of Mother Nature's lungs.

Stopping deforestation is one of the greatest challenges faced by our generation. The natural stock of teak suitable for boat decks is disappearing faster than a 500 hp powerboat. Time is running out. It's time to take a deep breath.

# Esthec®

This is the good news. Things can change. Things can improve. We don't have to have splits, splinters or creaks.

Esthec® is nature reinvented. A composite with all the outward features of teak, the look of teak and even the feel of teak. But then without teak. Unbreakable, in other words, creak-free, splinter-free and low maintenance.

Esthec® is a revolution in yacht building.

It gives designers the freedom they never had with teak. It delivers boat builders from incalculable and unpredictable price-rises. And liberates users from maintenance.

Esthec® is teak without teak. A revolution. User friendly, virtually indestructible, low maintenance. Child's play to clean, resistant to the most aggressive cleaning agents and of high quality.

What's more, Esthec® is many times faster to install than a teak deck.

# Freedom

Esthec® offers boat designers and architects complete freedom. When it comes to the number, direction, thickness and even colour of the seams, for example. Every conceivable pattern can be created. From a classic plank pattern to a creative contemporary design.

From now on, architects and designers are almost entirely free to choose even the colour of the deck. Different colours for different parts of the deck? Several seam patterns? It's up to you.

Esthec® is not only user friendly, maintenance free, high quality and everlasting; the tremendous creative freedom also adds an extra dimension to yacht designing.

Esthec® is a Bolidt product. An innovative company with 45 successful years of experience designing products for the maritime sector. We produce materials for sound reduction, fire retardation, corrosion resistance, mechanical load-bearing capacity and lowering the centre of gravity. Our activities also include deck finishing, assembling high-tech, lightweight construction elements and securing aligned engines, gas tanks and saddles against shock. Bolidt has the knowledge, experience and technology to guarantee a successful cooperation.
